FINAL YEAR PROJECT

PROJECT PROPOSAL

ChildCare — Child Welfare and Donation Management App

STUDENT INFORMATION

Student Name	Pakiza Rana
Roll Number	F23BINFT1E02052
Section	7th 2E
Submitted To	Dr Muhammad Suleman
University	The Islamia University of Bahawalpur

PURPOSE

This proposal presents the ChildCare project idea for academic discussion and scope approval. The application is intended to support verified child-welfare cases while protecting children's personal information and maintaining transparent donation and assistance records.

Prepared for academic project selection

PROJECT IDEA 1

ChildCare — Child Welfare and Donation Management App

OBJECTIVE

To provide a structured digital platform that helps an authorized welfare team manage verified cases of children in need while protecting children's identities and personal information.

BRIEF DESCRIPTION

The application will allow authorized team members to register a child's case and record verified needs such as school supplies, educational expenses, clothing, or other essential support. An administrator will review and approve cases before privacy-safe details appear publicly. Donors can contribute to a general welfare fund or support approved needs, depending on the final scope. The system will maintain donation and assistance records for transparency.

KEY FEATURES / IMPLEMENTATION

- Separate access for administrators, authorized team members, and donors.
- Case-submission form and administrator review/approval workflow.
- Privacy controls that restrict sensitive child details to authorized users.
- Donation records, assistance-status updates, and basic reports.
- Payment processing may be simulated for the academic prototype.

TECHNOLOGIES

Flutter: Mobile application interface.
Firebase Authentication: User sign-in and authentication.
Cloud Firestore / Firebase Database: Case information, donation records, and assistance updates.
Firebase Storage (optional): Supporting documents or images, with appropriate access restrictions.

IMPORTANT CONSIDERATIONS

The project must include strong privacy controls, case-verification procedures, and clear donation records. Real payment collection should only be added if an approved and secure payment process is available.
